Module 9 Challenge

Start Assignment

Due Aug 16 by 11:59pm

Points 100

Submitting a text entry box or a website url

Background

It's been two weeks since you were hired as a new data engineer at Pewlett Hackard (a fictional company). Your first major task is to do a research project about people whom the company employed during the 1980s and 1990s. All that remains of the employee database from that period are six CSV files.

For this project, you'll design the tables to hold the data from the CSV files, import the CSV files into a SQL database, and then answer questions about the data. That is, you'll perform data modeling, data engineering, and data analysis, respectively.

Before You Begin

- 1. Create a new repository for this project called sql-challenge. Do not add this assignment to an existing repository.
- 2. Clone the new repository to your computer.
- 3. Inside your local Git repository, create a directory for this Challenge. Use a folder name that corresponds to the Challenge, such as EmployeeSQL.
- 4. Note that you'll add your files to this folder and push the changes to GitHub.

Files

Download the following files to help you get started:

Module 9 Challenge files

; (https://static.bc-edx.com/data/dl-1-2/m9/lms/starter/Starter_Code.zip)

Instructions

This Challenge is divided into three parts: data modeling, data engineering, and data analysis.

Data Modeling

Inspect the CSV files, and then sketch an Entity Relationship Diagram of the tables. To create the sketch, feel free to use a tool like **QuickDBD** (http://www.quickdatabasediagrams.com).

Data Engineering

- 1. Use the provided information to create a table schema for each of the six CSV files. Be sure to do the following:
 - Remember to specify the data types, primary keys, foreign keys, and other constraints.

8/1/23, 4:20 PM Module 9 Challenge

• For the primary keys, verify that the column is unique. Otherwise, create a <u>composite key</u> \Rightarrow (https://en.wikipedia.org/wiki/Compound_key), which takes two primary keys to uniquely identify a row.

- Be sure to create the tables in the correct order to handle the foreign keys.
- 2. Import each CSV file into its corresponding SQL table.

SHOW HINT

Data Analysis

- 1. List the employee number, last name, first name, sex, and salary of each employee.
- 2. List the first name, last name, and hire date for the employees who were hired in 1986.
- 3. List the manager of each department along with their department number, department name, employee number, last name, and first name.
- 4. List the department number for each employee along with that employee's employee number, last name, first name, and department name.
- 5. List first name, last name, and sex of each employee whose first name is Hercules and whose last name begins with the letter B.
- 6. List each employee in the Sales department, including their employee number, last name, and first name.
- 7. List each employee in the Sales and Development departments, including their employee number, last name, first name, and department name.
- 8. List the frequency counts, in descending order, of all the employee last names (that is, how many employees share each last name).

Requirements

Data Modeling (10 points)

• Entity Relationship Diagram is included or table schemas provided for all tables (10 points)

Data Engineering (70 points)

- All required columns are defined for each table (10 points)
- Columns are set to the correct data type (10 points)
- Primary Keys set for each table (10 points)
- Correctly references related tables (10 points)
- Tables are correctly related using Foreign Keys (10 points)
- Correctly uses NOT NULL condition on necessary columns (10 points)

8/1/23, 4:20 PM Module 9 Challenge

Accurately defines value length for columns (10 points)

Data Analysis (20 points)

- List the employee number, last name, first name, sex, and salary of each employee (2 points)
- List the first name, last name, and hire date for the employees who were hired in 1986 (2 points)
- List the manager of each department along with their department number, department name, employee number, last name, and first name (2 points)
- List the department number for each employee along with that employee's employee number, last name, first name, and department name (2 points)
- List first name, last name, and sex of each employee whose first name is Hercules and whose last name begins with the letter B (2 points)
- List each employee in the Sales department, including their employee number, last name, and first name (2 points)
- List each employee in the Sales and Development departments, including their employee number, last name, first name, and department name (4 points)
- List the frequency counts, in descending order, of all the employee last names (that is, how many employees share each last name) (4 points)

Grading

This assignment will be evaluated against the requirements and assigned a grade according to the following table:

Grade	Points
A (+/-)	90+
B (+/-)	80-89
C (+/-)	70-79
D (+/-)	60-69
F (+/-)	< 60

Submission

Before submitting your Challenge assignment, make sure that you've done the following:

- · Create an image file of your ERD.
- Create a [.sql] file of your table schemata.
- Create a (.sql) file of your queries.

8/1/23, 4:20 PM Module 9 Challenge

• (Optional) Create a Jupyter notebook of the bonus analysis. (Note: there will be no extra points for completing this.)

• Ensure that your repository has regular commits and a thorough README.md file

To submit your Challenge assignment, click Submit, and then provide the URL of your GitHub repository for grading.

NOTE

You are allowed to miss up to two Challenge assignments and still earn your certificate. If you complete all Challenge assignments, your lowest two grades will be dropped. If you wish to skip this assignment, click Next, and move on to the next module.

Comments are disabled for graded submissions in Bootcamp Spot. If you have questions about your feedback, please notify your instructional staff or your Student Success Manager. If you would like to resubmit your work for an additional review, you can use the Resubmit Assignment button to upload new links. You may resubmit up to three times for a total of four submissions.

IMPORTANT

It is your responsibility to include a note in the README section of your repo specifying code source and its location within your repo. This applies if you have worked with a peer on an assignment, used code in which you did not author or create sourced from a forum such as Stack Overflow, or you received code outside curriculum content from support staff such as an Instructor, TA, Tutor, or Learning Assistant. This will provide visibility to grading staff of your circumstance in order to avoid flagging your work as plagiarized.

If you are struggling with a Challenge or any aspect of the curriculum, please remember that there are student support services available for you:

- 1. Office hours facilitated by your TA(s)
- 2. Tutor sessions (sign up ⇒ (https://tinyurl.com/BootCampTutorTeam))
- 3. Ask the class Slack channel/get peer support
- 4. AskBCS Learning Assistants
